

RUMBLER

Scandinavian Design made in Sweden

FURNITURE WITHOUT BACKSIDE The Rumbler concept is to bring out the uniqueness in every piece. We shape details and functions in the design to make the product not only beautiful, but also well adapted to today's flexible lifestyle. For instance, when Lars designed the coffee table Loft, he did what he always does – he thought about simplicity. Not only in the design, but also in the beauty of simplicity in the crafting process, by turning one leg into perfection – and split it in four.

The Decker tables are another example of the unique solutions we always strive for. The proportions of the built-in shelf has been meticulously measured down to the millimetre to match the dimensions of - a magazine. From the other

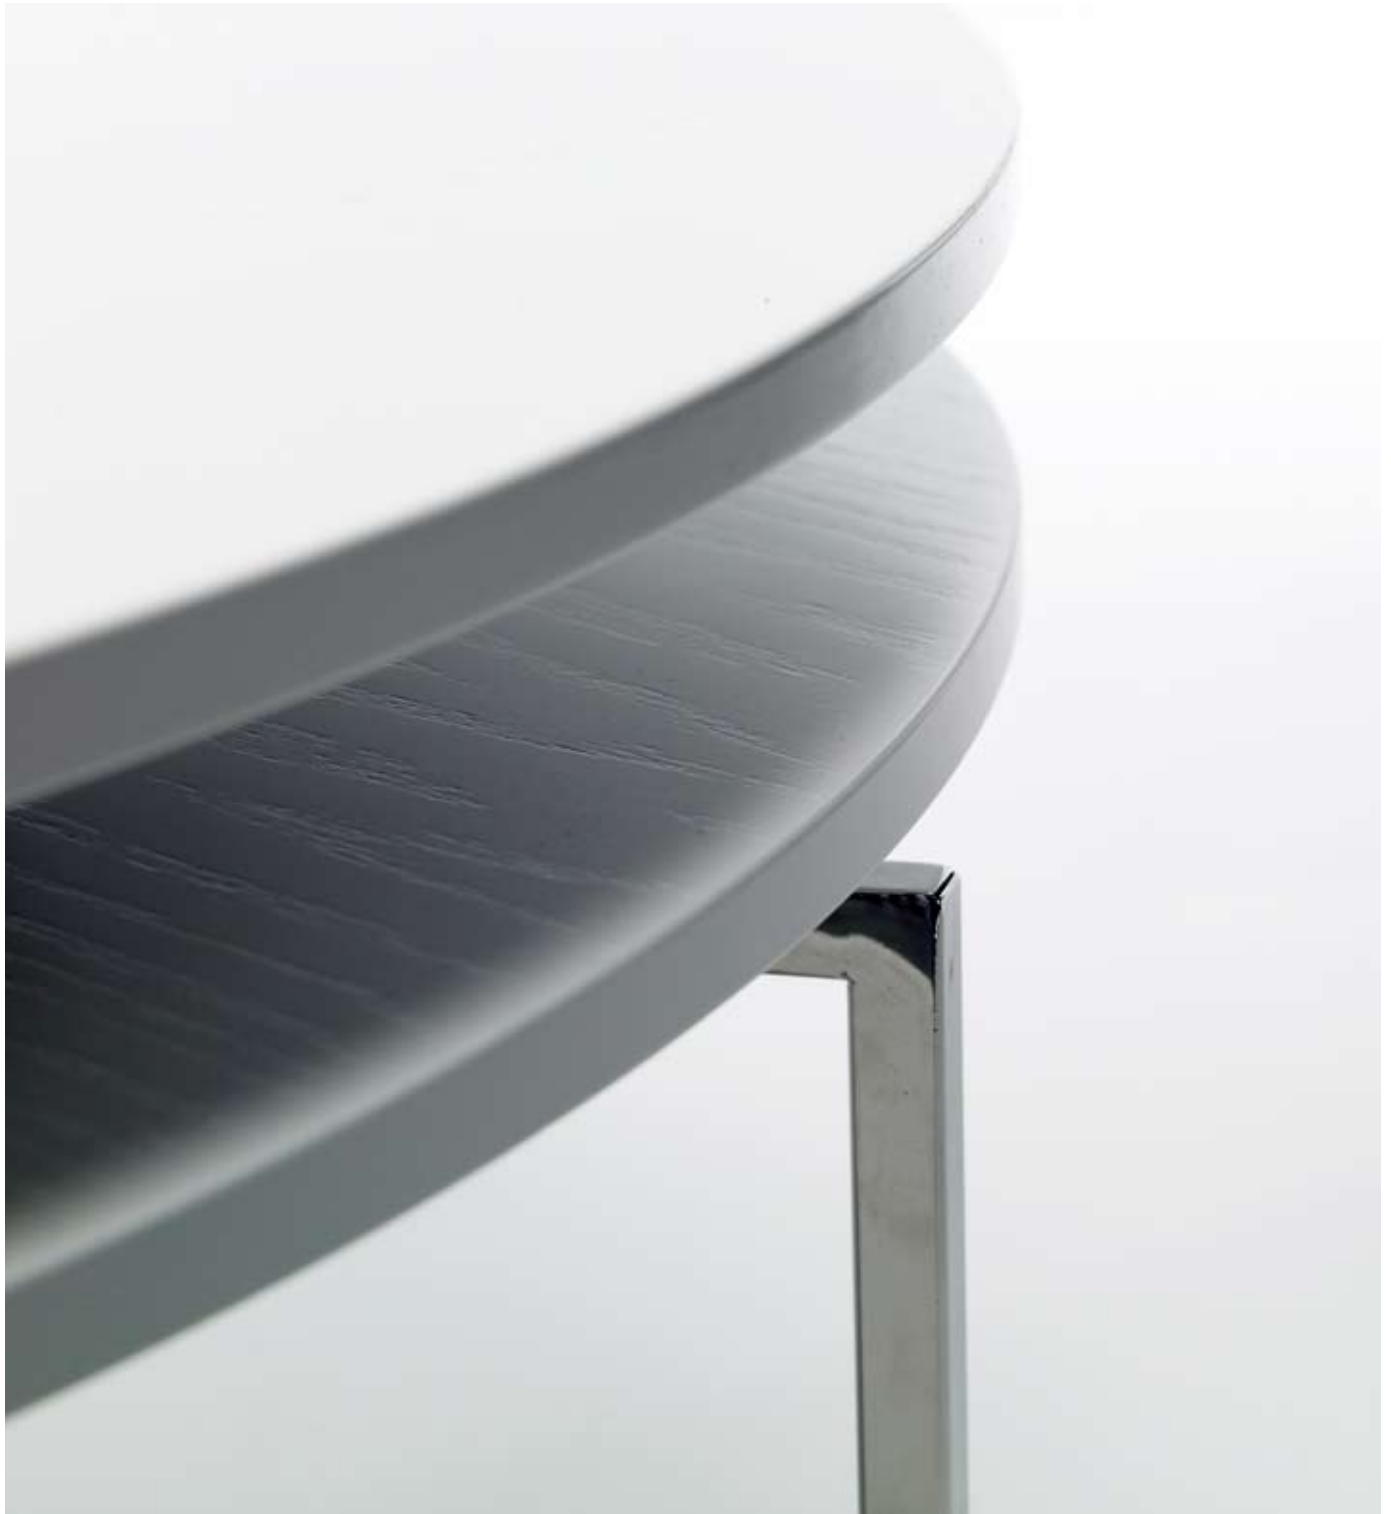

side, the dimensions of the shelf match those of a remote control. No crowding the surface anymore. The storage units Superside Hi and Superside Lo have an extraordinary feature in common with most of the Rumbler furniture. It has no backside, no unattractive angle to hide against a wall. This is because we think you should be the one to decide how and where you wish to place your furniture and not be limited by the composition of the piece.

Despite its size, the lamp series Tube has only one single cord that renders an impression of floating in mid air. Designed weights enable you to tune the lamp into a symmetrical position. Once again, simplicity is our inspiration.

Our furniture is manufactured in Sweden,

which gives us the possibility to oversee all steps in the process. A Rumbler piece is mostly made by hand, in small series. The furniture undergoes rigorous controls to guarantee the exceptional quality demands that is part of our concept.

For more information on the company and our furniture, please visit us at www.rumbler.se
